Mr. Mori, Ex. Vice Chair of JAIF

Attn: Miss Ryoko Kojima

Re: Your Letter of 12 Feburuary Heisei.

Dear Mr. Mori,

Today, I came down to KAERI in Daeduk and learned that Dr. Jonghwa Chang's group is fully prepared for translating your book entitled "Hydrogen Energy by Nuclear Energy," under the understanding that your permission for the book translation is granted gratis.

That group has already laid preparatory work regarding the subject for the past few years, and one of which can be seen from its basic study work last year under the title of "KAERI/RR-2288/2002, Basic Study of High Temperature Gas-Cooled Reactor Technology for Hydrogen Production." It is more than sure that your book will be informative and instructive in establishing the basic policy associated with the nuclear hydrogen. Furthermore, some sort of cooperative joint research work between Japan and Korea may be preferred in the future, when and if such is to become beneficial and time is ripe.

Always thanking you for your cooperation and expressing my respect to you, I remain.

Sincerely Yours,

Chang Kun Lee
