

§6. Overview of NIFS Campus Information Network

Yamamoto, T., Okamura, S., Network Working Group

The information network is fundamental for the research activity. The advanced NIFS campus information network named “NIFS-LAN” is the information infrastructure which is contributed to development of nuclear fusion research. NIFS has 300 staffs and the number of their PC is near 3,000. “Network Working Group” NGW provides 100Mbps / 1Gbps bandwidth to users. NIFS-LAN consists of three

autonomous clusters which have their own purpose and usage as follows;

1. *Research Information Cluster* is the network of general use, and covers the campus whole region.
2. *LHD Experiment Cluster* is provided for LHD experiment, and covers the building relevant to LHD experiment.
3. *Large-scale Computer Simulation Research Cluster* is provided in order to research the large-scale computer simulation efficiently.

NIFS-LAN is connected to Science Information Network 3 (SINET3), managed by National Institute for Informatics. The block diagram of NIFS-LAN is shown in Fig. 1.
