

Reaction Dynamics at Interfaces in DEMO Divertor Systems and Irradiation Effects (FRONTIER Project)

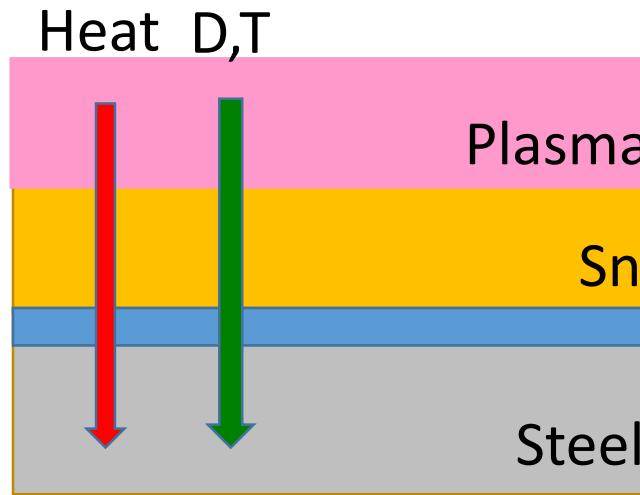

No single material can fulfil all requirements for plasma-facing components (PFCs). Hence, there are variety of types of interfaces in PFCs: interfaces between dissimilar materials, those between plasma and materials, etc..

- plasma/gas-solid
- solid-solid (dissimilar materials)
- liquid-solid
- plasma/gas-liquid (not involved in the project because of negligible influence of neutron irradiation).

In PHENIX project, neutron irradiation effects on bulk properties of W, such as thermal diffusivity, mechanical properties, hydrogen isotope retention etc., were examined. The post-PHENIX project focus its attention on interface phenomena.
